

# MONIKA SHARMA

@ monika779803@gmail.com    +91-9785965800    Jaipur, Rajasthan - India    in @monika-sharmaa/    Portfolio

## SUMMARY

Software Developer with **3 years of experience** building production applications using **JavaScript, React.js, Node.js, REST APIs, and MongoDB**. Experienced in **backend development, RBAC, authentication, debugging, testing, and performance optimization**, additional experience integrating OpenAI APIs.features..

## EXPERIENCE

### Full-Stack Developer

#### Tiara Software

July 2024 – July 2026    Jaipur, India

- Architected complex **GMS business workflows** across **8+ modules** including Sales, Quotations, Memo, CRM, and Inventory using **React.js, Node.js, and MongoDB**, with reusable UI components.
- Engineered **REST APIs** and **MongoDB data workflows**, improving backend processing efficiency by **20%** and supporting seamless integration with the React.js application.
- Built scalable frontend architecture using **React.js** and **Recoil** to manage complex application state, shared data, and dependencies across multiple business modules.
- Integrated **REST APIs** across business workflows, handling asynchronous operations, dependent API calls, validations, and evolving business requirements.
- Implemented **RBAC-based access control** for module- and feature-level permissions across Admin and User roles, supporting secure business workflows.
- Designed inventory and stock-management workflows based on business rules, reducing manual stock-management effort by **25%**; automated invoice, quotation, and report generation using **Puppeteer** and **Handlebars**, reducing documentation effort by **40%**.
- Resolved **30+ production issues** across PDF generation, reports, invoices, APIs, and complex business scenarios, while collaborating with clients during **UAT** to validate workflows and deliver fixes.

### Frontend Developer

#### Aeronpay

January 2024 – June 2024    Jaipur, India

- Developed multiple responsive React.js modules and interfaces for **fintech services** and business workflows, supporting consistent desktop and mobile experiences.
- Integrated REST APIs across business workflows, handling asynchronous operations, dependent **API calls**, form validations, application state, and error handling.
- Implemented complex form-driven workflows with conditional fields, validation feedback, loading states, and failure handling, achieving a **25% reduction in UI-related issues**.

### Software Engineer Intern

#### Snive

June 2023 – August 2023    Bengaluru, India

- Developed AI-powered web interfaces using React.js, **TypeScript**, and CSS for interactive image generation and segmentation workflows.
- Built the **segment-editing UI** for image upload, preview, point selection, processing, and visualization of AI-generated results.
- Integrated frontend workflows with **AI model outputs**, enabling users to select regions of an image and generate segmented product visuals for business use cases.
- Collaborated with senior developers to **identify and resolve issues** in AI-powered workflows and frontend integrations.

## EDUCATION

Bachelor of Science (B.Sc. Computer Science) – **8.7 CGPA**

#### Banasthali Vidyapith

July 2020 – May 2023

## TECHNICAL SKILLS

- JavaScript, Python, Java, C++
- React.js, Redux, Tailwind CSS, Material UI, Git
- MongoDB, Node.js
- Data Structures and Algorithms (DSA), OOP, DBMS
- OpenAI APIs, LangChain

## PERSONAL PROJECTS

### FundLab [\[Live Demo\]](#)

#### Classroom Mutual Fund Investing Simulator

- Built FundLab, a full-stack platform React, **NestJS**, **PostgreSQL**, **Prisma** that teaches students to invest by trading real Indian mutual funds at live NAVs with virtual money, so they learn without financial risk.
- Designed a transaction-safe trade ledger using exact decimal arithmetic, row-level locking, and validation to prevent duplicate or inconsistent trades.
- Built a **teacher dashboard** with a leaderboard and behaviour-based alerts that flag students who aren't thinking carefully: putting everything in one fund, giving weak reasons, leaving money idle, or buying and selling too often.
- Integrated an **OpenAI-powered** class summary that tells teachers which students need guidance and what to ask them. It keeps student data private by replacing names with anonymous IDs.
- Secured the app with **JWT auth**, a PIN brute-force lockout and role-based access, and verified it with **100+** automated API and end-to-end tests.

## ACHIEVEMENTS

- Cleared 2 rounds of the **Flipkart GRID Hackathon** through the competitive selection process.
- Achieved a rank in the top 300 in the **Women's India Hackathon**.
- LeetCode: 400+ problems solved
